

VACCINE POLICY

We understand you want what is best for your child and so do we.

- We firmly believe in the effectiveness of vaccines to prevent serious illness and to save lives.
- We firmly believe, based on all the literature, evidence, and current studies that vaccines do not cause autism or other developmental disabilities.
- We firmly believe that vaccinating children and young adults may be the single most important health-promoting intervention we perform as health care providers, and that you can perform as parents.

It is Jonesboro Pediatric Clinic's policy that our patients become fully vaccinated by age 2 and continue to adhere to the vaccine schedule recommended by the AAP until 21 years of age.

Unfortunately, if you cannot adhere to our policy, we ask that you seek pediatric care elsewhere.
